

'Habana' Cigar

1. Push the top of the cigar firmly into the body until both parts fit together with no gap.
2. 'Smoke' the cigar normally. The battery and nicotine cartridge will last between 1800-2000 inhalations.
3. Tip: Don't put the entire end in your mouth, just inhale from the tip so as not to get the cigar wet during operation. The paper is edible, but the tip will last longer by using it this way.
4. Once 'Activated' please do NOT remove the top from the body as this may damage the Cigar and / or cause the contents to leak.
5. If little 'smoke' appears, try flicking the cigar in a downwards motion very gently to move the liquid in the filter down to the atomizer – doing this occasionally may increase the amount of vapor produced, but be careful not to do this too often as it may lead to leakage.
